RE: Steve Blinder of Maui Fire & Flood

To Whom It May Concern:

We have had the pleasure of knowing and working with Steve for the last year, and it is without reservation that we recommend his services to anyone needing fire or flood relief. His guidance is unparalleled when it comes to quickly and efficiently rectifying flood, mold and other disasters.

As both a Homeowner and a custom home Builder, we had the opportunity to use Steve's services on our own home. We had an equipment failure, which caused a leak in our air conditioning assembly. Our new wood floor buckled. First we called another company and they did their best to dry out our floor. After it was dry, our wood floor Contractor re-finished our floor. They moved all our furniture back into the house and we thought all was good...until the floor buckled again. That is when we discovered Steve.

Once Steve was on the job, he set up his equipment quickly, and was very careful with our household belongings to insure nothing was damaged further. We were impressed with his thorough assessment of the situation, and his efficient equipment that quickly sucked the moisture out of the underlayment and dried the floor. Steve was careful to test the moisture in the floor and surrounding area to be sure there wasn't another water source adding to our problem. Steve is extremely knowledgeable in his trade, and we were delighted by his overall professionalism.

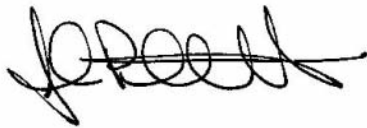

Today, we are working again with Steve and Maui Fire & Flood. Our part-time neighbor decided to sell his house, as he only used it for two months out of the year. When the house was inspected they discovered several water leaks. The leaks were fixable, but the real problem was the mold that had developed during the past ten months that the house had sat empty. The kitchen cabinets were so moldy that you could smell the mold when you walked in the door. We called Steve and he came to our rescue again.

Steve has taken charge and handled everything effortlessly, making our jobs a lot easier. Maui Fire & Flood made all the arrangements, from packing up the kitchen dishes, to doing all the repairs. This included taking out the granite slab counter tops, and rebuilding the cabinets that were contaminated with mold, then replacing the same granite tops after rebuilding the custom African mahogany cabinets. Steve ensured that the tainted area was confined, with an elaborate zip-wall system that protected the

surrounding areas from cross-contamination. He coordinated stripping the walls down to the bare studs, and drying everything in a contained area. Maui Fire and Flood is currently in the final stages of putting everything back in its place. Their experience is evident in their ability to make everything look as it did prior to the flood damage. We are amazed at their ability to complete so much in such a short amount of time!

Sincerely,
